Strategy

The objective of this sub-fund of the MFM FUND is to replicate as closely as possible the rising phases of the benchmark index while reducing risk during periods of decline. To achieve this, behavioural finance parameters are used to optimise both the timing of specific and sector-related decisions and the strategic allocations.

Fund manager comment

Great sector rotation, this essentially what happened in June. It had negative consequences for the index as the defensive sectors were under strong pressure and their share of the index is clearly higher than the weight of the sectors which benefited from the rotation. In index terms, it translates to a negative performance of 3.17%. The fund managed to resist quite well with a drop of 1.04%. This was due to our protective risk profile and to the recent sector exposure change. In the last 40 days, we started to strongly reduce defensive sectors in favour of financials, basic resources and some selected industrials names. Due to the more volatile nature of these kinds of companies, we have experienced a little increase in the volatility of the fund. Nevertheless, it remains in the range we target, i.e. 8-10% on 100 days historical volatility. As always, despite our positive assessment, the asymmetric portfolio profile remains a central theme.
