Strategy

The objective of this sub-fund of the MFM FUND is to replicate as closely as possible the rising phases of the benchmark index while reducing risk during periods of decline. To achieve this, behavioural finance parameters are used to optimise both the timing of specific and sector-related decisions and the strategic allocations.

Fund manager comment

After the excess of January, the market has undergone a natural and expected corrective phase. The risk taken by the investors, especially in the US market and a few of exotic strategy has backfired with quite a lot of stress. As we said in January, the context was clearly not supportive anymore for taking immediate exposure and risk.

From an underperformance in January, the fund swung in clear outperformance in February with a slight decrease of 1.09% against -4.72% for the index.

As said, we were prepared for this more difficult phase with the defensive profile of the portfolio. There could be more volatility in the next weeks or so but taking into account the very low level of the European index any weakness should be used to rebuild some exposure in more cyclical sectors. With confirmed higher volatility than in the recent past, it is certainly advisable to continue to participate with very tight protection in place.
