### Fund Manager's Comments

In February, we almost doubled our AUM and continued to deploy capital. Since inception, the MSCI World (USD) is up 2.32%, the HFRX Equities Hedge Index up 1.88% and the MFM Global Thematic Fund (USD) is up 2.32%. The Fund has still a very low net long exposure to Equities last month. We are continuing to favor Europe versus the US for the following reasons: lower cost of capital, lower EUR and QE. In Asia, we are still positive on our Japanese exporters theme. We continue to like the risk-reward of the solar theme that we will increase soon. On the short side, our US crazy internet basket continues to look expensive although Gopro corrected heavily last month. On a Macro level, over 50 percent of the outstanding sovereign debt in northern Europe currently has a negative nominal yield. It makes holding the risk free asset almost ridiculous. Unlike the Fed, the ECB was bold enough to take rates negative and might restart the economy through reflation in a couple of quarters instead of years. By keeping rates very low, the fed did not force investors to sell bonds, stretching the process longer. As we have seen during the last 2 month, the rush to grab European risk assets might just have started.
