**Fund Manager's Comments**

The Fund was down 0.2% in September while our benchmark was up 0.68%. Samsung Electronic's lithium battery problems pushed the stock lower but we remained convinced of the overall value of the company and decided not to sell any. The stock is now back to all-time highs. Solar is currently one of the largest theme in the fund. We believe that there are several positive catalysts: China demand, revitalized investor interest, the U.S. election, and valuation. We think that the market is much less oversupplied than it was in 2012. China's proposed Jul. 1, 2017 Feed in Tariffs cut, which could add ~25GW of 1H17 Chinese "pull-in" demand, could even temporarily create an undersupplied solar market in 1H17. After seeing 32 straight weeks multi-wafer/multi-cell price declines, prices for both of these substrates moved higher last week. Clean energy funds might "refocus" on solar stocks and a likely H. Clinton Presidential election win might push the sector higher given her robust 140GW solar installation goal, even if unachievable. Finally, the Solar TAN Index has materially underperformed the mkt this year and is down 15% since march 2016 as US Natural Gas prices are up more than 90% during the same period. This spread usually takes a couple of months to tighten.
