Fund Manager's Comments

Low Safety Content in China & India

The Fund was up 1.71% in January while our benchmark was up 2.14%. We continued to keep a low net long exposure during the last month in order to maintain a safer market exposure.

Following a disappointing earnings, we initiated a new position in Autoliv in our "Car of the Future" theme. Autoliv is the global leader in seat belts and airbags with 38% market share. It has grown organically by an average of 4% for the last 10 years and has had a stable EBIT margin of 8-10% most years. It returns 90% of its FCF through dividends and buybacks. The market values Autoliv at 12x next year's earnings. Active Safety (lidars & sensors) could be bigger than the Passive Safety market in 2025 and they are expanding capabilities in Active Safety with a high R&D of 7% of sales.

We think that Autoliv will gain market share as its main competitor, Takata, has had product failures that led to accidents and the largest auto recall in US history. Since those events two years ago Autoliv has won 55% of all new orders. There is a long lead time in the industry so Autoliv will only get paid 3 years on but the sales are guaranteed. EBIT margin could expand
