Fund Manager's Comments

The fund was up 0,20% while the benchmark was up 1.20% in April. The gap between soft data, such as sentiment numbers, and hard data, such as GDP, auto sales, loan growth and unemployment, was causing consternation among market bulls. Banks have not been lending under the Trump administration as they have been under the Obama tenure. Consumer loan growth is up 1.4% year to date basis April. While loan growth is always a positive sign for the economy, it was up 3.1% the prior year. What's more, consumer and industrial (C&I) lending has rolled over. In November 2016 it was up past the 2,100 level. Since the election it has fallen to close to the 2080 level, basis April. The loan data shows everybody is in wait-and-see mode pending details of fiscal stimulus (=tax reform) – which highlights the risk of softer hard economic data. One point of battle that could be drawn is the replacement of the controversial Border Adjustment Tax (BAT) with a Value Added Tax (VAT). A country can tax production and consumption. The US currently has a high tax rate on production yet no federal tax on consumption. Compare this with many other countries who have much lower taxes on production and higher taxes on consumption. This naturally disadvantages US exports and attracts imports. A BAT is an attempt to twist the US tax code so as to offset these disadvantages by subsidizing exports and taxing imports. These nuanced details surrounding the complex task of tax reform are what is likely to drive sentiment, that soft data, and stock prices to a large degree in the coming month. On the portfolio side, we increased our position in LG Display as we remain very bullish on the name and as it remains one of the best way to play the OLED theme. It has underperformed SAMSUNG Electronics so far and its valuation remains compelling at 0.85x Book value.
