Fund Manager's Comments

The fund was flat in March while our benchmark was down -1.91%. We used the recent market correction to take some profit by covering two shorts in our « US Food Manufacturer » theme. The potential trade war is bringing a lot of new variables to a market that is still digesting the US tax cut impact. Its escalation remains a clear risk that could damage economic growth. Today's macro situation creates a lot of distraction and we will try to remain focus on our investment themes and continue to identify opportunities away from the noise.

As you know, we like value stocks and it has never been a better time to be a contrarian. Technology represents 25% of the S&P 500 today and is by far its largest sector. Last year was a fantastic year to buy expensive momentum stocks which became even more expensive. We stayed on the sideline and it was not pleasant, but things seem to be changing. The Tech sector was trading at 1.3x EV/Sales in 2009 to reach 4.5x recently. This is an exceptional multiple expansion. With all the ETF inflows, US tech & FAANGs have become a crowded trade. When the sector will correct, it will have immense consequences. First, more capital will be withdrawn from the U.S., bringing further weakness in the U.S. dollar. Second, this could weaken the case for passive investing and bring back to life active money management.

Recent waves of volatility may be announcing the storm with Facebook recently shaken by the Cambridge Analytics scandal, Amazon facing Trump's tweet attack and Tesla not producing enough cars. But as long as investors are ready to pay an excessive premium for growth, this situation might last a while.
