### Fund Manager's Comments

The fund was down 0.82% in January. We kept a very cautious net long exposure of 7.4%, as we don't find interesting long themes currently. The strong US market out-performance over Asia and Europe in January did hurt us as we are currently net Short the US. We took our profit by selling our Easyjet that we bought shortly after Brexit last year in our theme "Bexit, buy it". The RSI on the MSCI world touched 92, signaling one of the most overbought situation since 2003. We are not jumping on the band wagon currently and look forward for more friendly environment for our value and contrarian strategy which means more dispersion and volatility.

In January, we added Zalando to our contrarian short theme "online retail" due to elevated inventories, rising Days Sales Outstanding (DSO) and unsustainable boost to cash flow from operations. We think that the current valuation for pure online retailers continue to be too high. We favor Omni channel retailers who can manage a light brick and mortar network combined with a strong online presence. As an example, Alibaba and Amazon are buying retailers to proceed in the Omni channel direction.
