

PORTRAIT

Marcel Bourg

Quantitatif Researcher

Graduated in theoretical mathematics from EPFL, my objective in working in finance is to deepen my understanding of this complex field.

To support the investment team, I develop machine learning algorithms that draw on topology and certain aspects of probability theory.

A QUICK BACKGROUND

I cultivate my curiosity by learning more about the world around us, through natural sciences, social sciences (including economics), and philosophy.

MY FUTURE PROJECTS

In September 2026, I will begin a Master's degree in macroeconomics in Paris.

I aim to contribute to economic research in order to help shape public policy in our countries towards a more sustainable and fairer world.

MY PASSIONS

I am passionate about knowledge and understanding. This expresses itself in complex fields such as economics, but also in simpler areas like games.

WHAT I'M PROUD OF

I have had the privilege of receiving a high-quality education at EPFL, one of the best universities in the world, and I am very proud to put this background at the service of the common good.

This ambition allows me to study complex topics that I am certain will never bore me and in which I can be useful.

FUN FACTS

1

FROM « LIE » TO « LIE-DOWN »

After defending my thesis on Lie algebras, I ironically spent a few months lying-low on friends' sofa beds.

2

TABLE FOOTBALL

Table football has brought me entertainment, a few tournament wins at EPFL, and even a job opportunity. It was between two shots on goal that Christophe Beney suggested I apply to MFM.

3

THE ART OF COUNTERPUNCH

Despite my slight build, I am a big fan of boxing, which I practised for several years. My favourite boxer: Thomas "The Hitman" Hearn.
